

New Visitation Guidelines

For the safety of our patients and to slow the spread of the Flu (including 2009 H1N1), we have implemented new visitation guidelines:

- Parents with children age 16 and under should not bring them to visit patients. This age group is at greater risk for flu complications and is contagious longer than older children and adults.
- Visitors with flu-related symptoms (fever greater than 100 degrees, body aches, runny or stuffy nose, sore throat, nausea or vomiting) are asked to stay away, unless they are seeking treatment themselves.

We appreciate your cooperation!
